BLACK BOX

BLACK BOX

Definition

- Made of High Density Polyethylene (HDPE) material
- Cabin volumes of different sizes and capacities (50 lt - 1000 lt),
- Compact system design that increases pump life and efficiency,
- Body with strength calculations according to the place of use,
- Panel with pressure-resistant hose and camlock connection for submersible pumps, floater connection slots are ready,
- Integrated basket filter (twin body models only)
- Above ground or below ground installation possibility,
- It is the easiest and cost-efficient to install, maintain and operate compared to pumping stations made of concrete.
- Highly resistant material against corrosive substances,
- Suitable for single or two pumps depending on cabin volume and pump size,
- Possibility of different connection diameters upon request,

Usage areas

- It is a system that includes pumps and equipment to pump water from one place to another.
- Used for various systems such as water supply, water and wastewater treatment plants and sewage systems.
- It completely eliminates the installation, maintenance and operating costs of reinforced concrete body systems.
- Package Pump Stations save the construction works in the field with their compact body design. While minimizing operating costs.

Usage places

- In the parking lots of buildings, restaurants and cafeterias where hygiene is required.
- Projects where manhole use is not suitable.
